PURPOSE

The differences and similarities between the wide and diverse spectrums of AS, HFA, NLD, ADHD, PDD-NOS, and SID, are often blurred and difficult to understand. Recognizing the patterns that define the essence and characterize the boundaries of these spectrum conditions is essential to both caregivers and professionals. The goal of this program is to review developing findings—based on current scientific research, anecdotal observations, and clinical case studies—that can assist professionals and laypersons to more effectively maximize their service to these populations.

PRESENTER
